

# flexible metal container

With our flexible metal container we can offer you an attractive cost-related and time-saving alternative to using a zinc inner coffin. The container is a hermetically closed metal system that can be used for international funeral transport.

This new flexible metal container offers funeral companies, mortuaries, hospitals and emergency services the possibility of preserving the deceased hygienically for a long period of time.

Flexible metal containers have been used for:

- ▶ The terrorist attack of 11 Sept 2001, New York City
- ▶ The tsunami in Southeast Asia
- ▶ Hurricane Katrina, New Orleans

*Our product is used by:*  
**funeral directors, mortuary,  
hospitals and emergency services**

▶ **Hermetic seal**  
*100% airtight  
and watertight*

The solution for **international repatriation** and preserving the deceased **hygienically**

# Benefits

*flexible*  
metal container

## ▶ **Hermetic seal, 100% airtight and watertight**

When used properly, odour and/or liquids cannot escape. People who come into contact with the deceased are entirely protected.

Thanks to the flexible metal container there is no chance of injury as with a sharp zinc coffin, not even during welding..

## ▶ **Saves time and is easy to use**

The metal container can easily be closed in 5 minutes, making it much easier to use and more time-saving than a zinc coffin.

## ▶ **Flexible use in every coffin shape**

With its flexibility and adaptability it can be used in every coffin, regardless of the shape, while a zinc coffin has a rigid shape and only fits into certain coffins. It can also be cut to the length needed.

## ▶ **Can be written on**

The metal container can be written on so that details such as the name of the deceased can be displayed on the cover.

## ▶ **Very economical use of storage space and easy logistics**

Since the metal container can be delivered on rolls, it takes up very little storage space. A 90-meter roll is comparable to 40 zinc inner coffins.

As well, the container is manageable and light, making it easier to use.

## ▶ **Affordable**

When purchasing a roll, the costs per container are a fraction of the price of a zinc inner coffin.

## ▶ **Cost-saving**

Due to its light weight, transport costs per airplane are lower as compared to using a much heavier zinc coffin since basic airfreight costs normally depend on weight.

## ▶ **Time-saving when opening and closing again**

The container is easy to open with scissors and can easily be closed again.

## ▶ **Simple, cost-effective, space saving, environmentally friendly and easy to remove**

The metal container can easily be removed without any problems and can be treated as normal waste.

The container is closed with a heat sealer, making it easy to handle and low in weight.

▶ **Hermetic seal**

**100% airtight and watertight**
